Rendezvous / AV integration does it all for you!

ENTERPRISE LEVEL SCHEDULING

Whether your meeting is on a single site or in multiple locations, Rendezvous checks calendars and quickly puts the right people together with full time-zone awareness. It even helps you organize catering, video conferencing, telepresence and AV resources – all controlled from anywhere in the world via any device with a browser or seamlessly via Outlook.

WHY RENDEZVOUS FROM NFS?

Rendezvous integrates with Crestron, Harman AMX, Evoko, Cisco TMS, Office 365 and more. We can be the “glue” that ties multiple hardware and software platforms together, that connects old and new digital signage, and that also allows for future changes and expansion.

Rendezvous’ rich API set supports easy and cost effective integration. We are a consultative software company, not a hardware company. Our ability to customize complex workflows allows us to extend the functionality of other solutions, through seamless integration.

We are collaborative, service-orientated and all about helping our partners find the right solution for their clients. Rendezvous Freespace sensors promote increased employee productivity and are reliable, inexpensive and easy to install and maintain.

THE CHALLENGES SOLVED BY RENDEZVOUS

- Meeting rooms/spaces are empty in one area of the building and full in others
- Too many e-mails every time a meeting is changed causing confusion and frustration
- Communication challenges among service teams
- Can't get no-shows to change their behavior
- Conference services not having full visibility of all locations

We unify the workflow across the enterprise to reduce admin time and drive better workspace utilization.

THE PROVIDERS WE INTEGRATE WITH...
