Rendezvous Desk Booking

Deliver a great digital employee experience and maximise space usage

For today's hybrid workplace, NFS have designed a range of user-friendly and easy to deploy solutions.
We offer you a choice of native, mobile app and occupancy sensor-based solutions designed to meet your needs.
Our solutions offer a great user experience, maximum desk occupancy and a fast return on investment.

Easy to use

Our Rendezvous mobile apps are designed for ease of use. With floor-plan-based booking your staff can select and book a desk in seconds.
Outlook integration ensures that they never forget a booking - it is entered automatically into their calendar.

Fast and easy check in/out

Our sensor technology is ideal for finding a hot desk or a huddle space fast. Find a free space on the digital signage and walk up to it – the sensor takes care of the rest.
Built with collaboration in mind

Collaboration is key to productivity in the hybrid workplace.
Thanks to our colleague search feature you can ensure that you are always able to locate your colleagues easily on the floorplan. Ideal for planning your day and arranging to work with your team.
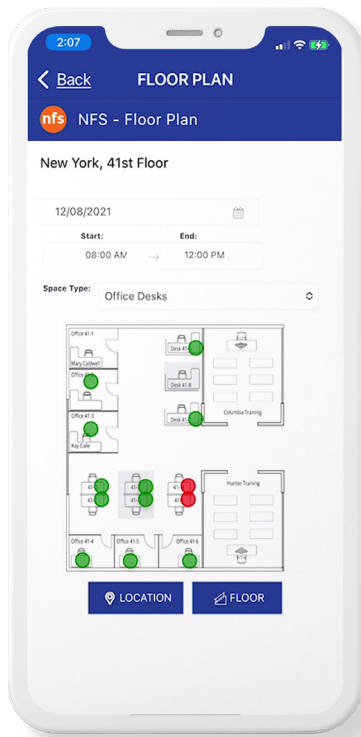

Tailored to your needs

Thanks to our open API, the solution easily forms part of a wider ecosystem.
Rendezvous integrates with hardware solutions such as QR scanners, RFID readers, desk panels and digital signage systems to create a modern, touch-free and seamless employee experience.

More than desk bookings – plan everything

Get the full power of the desktop application in your pocket.

Mobile App

Staff can easily book ancillary services such as meeting rooms, catering and AV – straight from the app and with full Outlook integration.

Data-driven decision making

Sensor technology enables you to pinpoint exactly how each desk, booth or seat is being used in real time on the digital signage screens. Make real estate decisions based on accurate historical usage data – no more guesswork.

Never waste space

Our reverse hoteling feature ensures that you can easily add desks to the booking system. For example, when a colleague is on holiday their desk can be released for anyone to use and then released back to them automatically on their return. Ghost bookings become a thing of the past – auto-release of unoccupied desks means that empty desks can be released quickly to those who need them.

" WHAT OUR CLIENTS SAY

Here is a selection of the many positive testimonials recently posted on the independent Gartner Peer Insights website:

"The set up and implementation was seamless. The team that worked with us couldn't have been more responsive, helpful and professional."

"Our users have easily adapted to using the application and it has given us some valuable insight into how our space is used and will allow us to better plan for the future."

"The software we have acquired itself is very user friendly and our employees have pickup easily how to use it. From the outset Stephen was extremely engaging and flexible with our requirements and our budget."
